

Answer Sheet

Name: Sample Student Roll No: 07

Ans 1: The chemical formula of water is H_2O .

Ans 3: Newton's Third Law states that for every action, there is an equal and opposite reaction.

Ans 2: Photosynthesis is the process by which plants make food using sunlight.

Ans 4(a): $15 + 27 = 42$

(Q4 part b not attempted)

(Question 5 not attempted)

Ans 6: The water cycle begins with evaporation, where heat from the sun causes water in oceans, rivers and lakes to turn into water vapor and rise into the atmosphere. As the vapor rises, it cools and undergoes condensation, forming tiny droplets that gather together to create clouds. Continuing onto the next page...

(pg. 2)

(Ans 6 continued) Once the droplets in the clouds become heavy enough, they fall back to the earth's surface as precipitation, in the form of rain, snow, or hail. This water then collects in rivers, lakes, and oceans, or seeps into the ground as groundwater, completing the cycle and starting the process again.

Ans 7: Two renewable sources of energy are solar energy and wind energy.

(Question 8 not attempted)

Extra Note: I also read that the mitochondria is the powerhouse of the cell.
